NUMBER 37

AUGUST 26, 1971

JACK HAGGERTY

Mr. John William Haggerty, Chairman of the School of Forestry at Lakehead University, died suddenly of a heart attack in his home on Sunday.

Born and educated in the Maritimes, Mr. Haggerty graduated in Forestry from the University of New Brunswick. Upon graduation he accepted a position with the Marathon Corporation.

In 1951, he joined the Lakehead Technical Institute as a lecturer in Forestry. He accepted responsibility for the

Forestry program in 1957. When the School of Forestry was established at the University in 1965, he was appointed Chairman, in which position he held the rank of Associate Professor in Forestry.

Throughout his 20 years of association with Lakehead University, the School of Forestry was his primary concern. He was not only dedicated to maintaining high standards, but he was also a driving force behind the expansion of the Forestry program to full degree status. Largely as a result of his efforts, this has finally been achieved. The appointment of additional staff was announced by Mr. Haggerty only last week.

His loss will be felt deeply in the community, particularly at the University, where fruits of his leadership in the School of Forestry will always be a tribute to him.

L.U. Parking Regulations

On August 25, 1971, the Board of Governors of Lakehead University adopted traffic and parking regulations which will become effective on campus on September 1, 1971. "The purpose of these regulations is to facilitate the safe and orderly conduct of University traffic and parking and to provide services within the limits of available space and facilities".

Copies of the Lakehead University Traffic and Parking Regulations 1971-1972 are being sent to all full-time and part-time Faculty and Staff members and copies will be provided to all students during Regis-

tration. Copies are also available at the Security Office, Room UC0003G. These regulations apply to all persons operating and parking a motorized vehicle on campus. The following are excerpts from the Regulations:

...Free parking is available in the lots in front of the Faculty of Education (lot 9) and adjacent to the Athletics Building (lot 10).

...All persons are required to obtain an authorized parking permit for any motorized vehicle which they wish to park on University property, with the following exceptions:

(i) permits are *not* required for parking in lots 9 and 10 (the lots in front of the Faculty of Education and adjacent to the Athletics Building, respectively).

(ii) permits are *not* required for parking on University property between the hours of 7:30 p.m. and 8:00 a.m. Monday through Friday and at any time on Saturday, Sunday and official holidays.

...The following are the types of regular parking permits and the parking fee corresponding to each for 1971/72.

Faculty/Staff Vehicle	\$10.00
Full-time Student Vehicle	10.00
Residence Student Vehicle	10.00
Part-time Student Vehicle	5.00
Motorcycle, scooter, etc.	5.00
Visitors' Vehicle	
(unlimited entry)	10.00

...A temporary visitor's permit may be purchased at the time of entry onto the campus for a fee of 25¢ and will be valid for the date issued.

...While every effort will be made to provide adequate parking space, a parking permit is not a guarantee that a space will always be available.

...Vehicles which are parked on fire access routes, illegally parked in reserved or service areas, obstructing the passage of emergency or service vehicles, blocking entrances or in any other way impeding proper traffic movement, shall be towed off campus. If such action is necessary, the operator and/or owner of the vehicle will be responsible for all costs involved.

...These traffic regulations are in effect twenty-four hours per day.

Parking permits may be obtained at the Accounts Office upon submission of the completed application form and payment of the required fee. It is hoped that all Faculty and Staff members will obtain their permits prior to Registration in order to avoid long waiting lines when the students are here for Registration. The parking permits must be obtained by September 15.

Academic Building

Academic Building

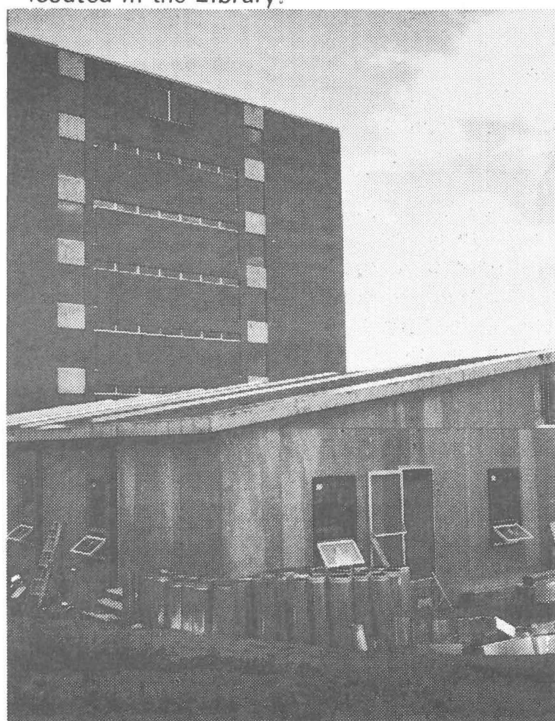

The construction currently underway adjacent to the Main Building and the Library is known as the Academic Building. It will house faculty offices and classrooms; and it will serve all faculties in the University.

It includes classrooms in a multitude of shapes and sizes designed to complement current approaches to learning. For example, there are three "case study" rooms which feature horse-shoe shaped, teired table-tops wherein attention is focused on the centre of the room from every vantage point.

The building is designed to accommodate additions to itself, so that it can serve as a link in planned expansion which may eventually connect the Faculty of Education Building with the Current campus. It is to be completed for September 1972.

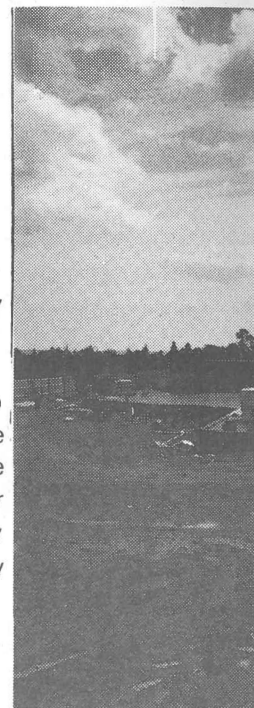

Temporary Structure

As a result of cut-backs on the Provincial level, the University was forced into building a temporary structure adjacent to the Library for the purpose of housing non-academic functions formerly located in the Library.

Temporary Structure

The structure consists of one lecture theatre, two seminar rooms and administrative offices. The entire interior is flexible so that partitions can be rearranged for any purpose. When original plans for expanding the Library are reactivated, the temporary structure can be dismantled to be sold or re-used by the University.

Athletic

Power House Complex

Construction around the current Power House Complex represents expansion of power facilities to adequately supply the needs of a rapidly growing University in the areas of electricity, heating, chilled water for air conditioning, domestic water, and sewage disposal.

A second smoke-stack, a fourth boiler and additional air conditioning towers have been completed, or are under construction.

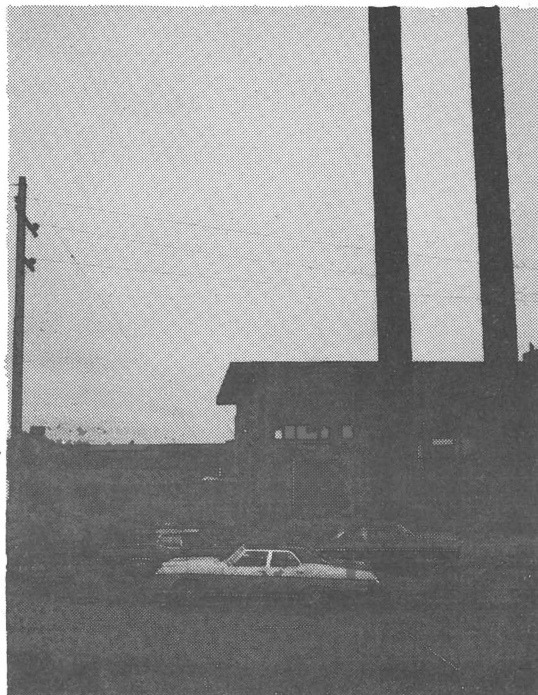

Completion of current projects will enable the Power House Complex to service considerably more square feet than we have at present. More additions, therefore, are not planned for the immediate future.

Athletic Facilities

Current construction around the Fieldhouse represents the third and final stage in construction of athletic facilities at Lakehead University. It features an olympic swimming pool, fifty meters long with six lanes. However, it also includes three squash courts, one general purpose training room suitable for gymnastics or dance exercises, a smaller room primarily for wrestling, and two classrooms. Outside ancillary facilities will include tennis courts and a learner's ski hill. This stage is slated for completion by September, 1972.

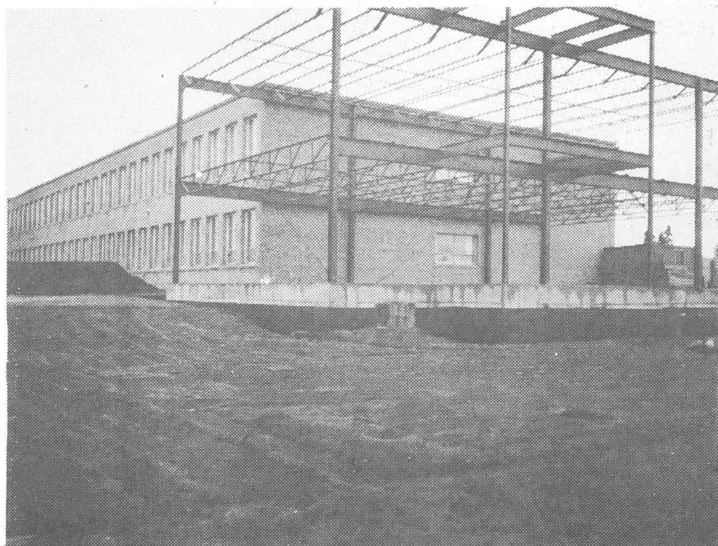

The first stage in construction of athletic facilities included a competition basketball court, offices for the Athletic Department, and minimal ancillary facilities. The second stage expanded facilities to accommodate the third stage; including shower facilities and a structural base for the third stage teaching facility.

The swimming pool has been financed jointly by Confederation College, the City of Thunder Bay, and Lakehead University. And the facilities will be available to the entire community.

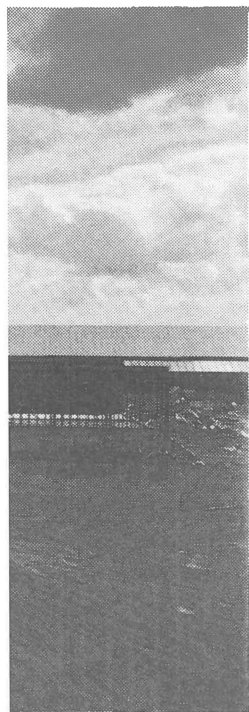

Power House Complex

Education Addition

Education Addition

ilities

This building was originally built by the Ontario Department of Public Works for the Department of Education. It was designed to educate teachers in the traditional way, so that the building resembles a conventional high school.

The building is now woefully out of date. The addition to the east end will house a library on the second floor, with offices and classrooms below. Remodelling of the existing structure is also underway. For example, labs which served home economics and technical shops have been converted to a science lab area.

meetings

Arts and Crafts

For the past several years non-credit programs in arts and crafts have been developing on the University campus. The Faculty of Arts is pleased to announce that this year, due to the dedication of a group of local artists and University officials, the Aesthetics Society, Incorporated, has come into being on Campus and in the community.

The Aesthetics Society has a number of objectives, the foremost of which is to provide competent instruction in the arts for all interested students and citizens of Thunder Bay and surrounding districts. Their aspirations lie in painting, pottery, and in a gallery where local artists' works may be exhibited.

In the case of painting, they wish to set up a workshop which would be run on a year-round basis instead of just concurrent with the University's academic year. This would allow more members of the community, and in particular school children, to receive quality instruction in the use of charcoal, ink, watercolour and acrylics.

With respect to pottery, the Aesthetics Society is anxious to see citizens of Northwestern Ontario given the opportunity to develop skills which have traditionally been lacking in this area. Approximately fifty students studied this past year at the facilities available at the University. The program was a resounding success and the workshop instructor, Mrs. Jerri Ashby was discouraged only by the fact that some people who showed interest could not be accommodated due to the lack of resources. It is the aim of the Aesthetics Society to make provisions such that no person should be held back from developing his artistic skills and interests.

The third aim of their program is the establishment of a permanent gallery to display the works of young artists. The gallery would also provide space to display work from all over Canada.

The program will function at the University this year under the directorship of Ray Andrews in painting and Mrs. Jerri Ashby in the pottery workshops. Both courses will include demonstrations of different materials, various equipment, and novel techniques in painting and sculpting. It is hoped that those taking the courses will attempt more than one type of work. The pottery program will feature a Saturday morning children's workshop with the purpose of generating a local interest in art and an opportunity for creative expression from the earliest possible age.

Campus Notes

● Dr. J. S. Griffith, Associate Professor of Mathematics, has been invited to the United States Naval Observatory, Washington D.C. for a week of consultative talks in September on cooperative work in Celestial Mechanics. The main topic will be the extension of the theory of the motion of the Moon to match the precision of present day observations (laser ranging, spacecraft doppler, radar ranging). Dr. Griffith is the sole representative from Canada on the United States Ephemeris Working Group, which was established to coordinate research on the orbital motion of the planets and satellites.

● Mr. A. MacDonald of the Biology Department presented a paper at the joint meetings of the Canadian Botanical Association and the American Institute of Biological Sciences, which took place at the University of Alberta, Edmonton, June 20-24 this year. The title of his paper is "The floral development and morphological considerations of *Comptonia peregrina*."

Also attending on behalf of the Biology Department were Dr. P. Barclay and Dr. G. H. Harvais.
